33 FT INTERNATIONAL ONE DESIGN CLASS
FROM X-YACHTS OF DENMARK

500
X-99
MK II

DESIGNED BY NIELS JEPPESEN
**X-99 UNDER SAIL**

**DIMENSIONS:**
- L.O.A. 10,090 m - 32,810 ft.
- L.W.L. 8,500 m - 27,890 ft.
- B. max 4,090 m - 13,440 ft.
- Draft 3,750 m - 12,300 ft.
- Cabin height 1,800 m - 5,910 ft.
- Ballast 1,300 kg - 2,870 lbs.
- Displ. 2,980 kg - 6,570 lbs.

**Engine:** Diesel 7.4 KW - 10 HP

**SAIL AREAS:**
- Main 32.2 m² - 348.0 ft²
- Genoa 115º 36.0 m² - 382.0 ft²
- Genoa III 100º 20.0 m² - 215.0 ft²
- Stornsh 85.0 m² - 910.0 ft²
- Spinaker all round 78.0 m² - 840.0 ft²

X-99 One Design Class
THE WORLD'S BIGGEST SELLING AND
MOST ACTIVE 10 M ONE DESIGN CLASS

X-Yachts A/S was founded back in 1979, and the
first yacht to roll out of the doors of the factory in
Haderslev, Denmark was the 8 m One Design
"X-79". The brainchild of young Danish designer,
Niels Jeppesen, the X-79 was (and still is) a fast,
simple, non-type formed yacht that met with instant
approval, and strong fleets were quickly established
in Denmark, Germany and Sweden.

By the mid 80's there was an increasing demand for
a yacht with similar qualities to the X-79, but of
around 10 m. A One Design Class yacht fast enough
to beat existing yachts of similar size, including 34
ton racing yachts, yet comfortable enough to allow
for occasional or extended cruising.

The prototype of the X-99 was launched in 1985,
and within one week a staggering 100 boats were
sold to clients who had paid a small deposit based
on a draft proposal, test sailed hull # 001 and
signed the actual order. No other boat, before or
since has enjoyed such a spectacular launch.

Within the first 2 years the X-99 had established
fleets in Denmark, Germany, Switzerland and
Holland. This list of accredited National fleets soon
grew to include the UK, Hong Kong, and most
recently Sweden.

Starting first with National, then European, and
finally World Championship regattas the X-99 fleet
has grown in both numbers and stature. The 1989
World Cup was won by renowned American yachts-
man Jim Brady, and with Dutch, Hong Kong and
Danish crews appearing on the winner's rostrum
over the years the fleet enjoys a truly International
flavour. Annual Championships attract participants
from up to 9 different countries, and up to 3 differ-
ent continents with fleet numbers constant at
between 40 - 50 boats. Since hull 001 took to the
water in 1985 the X-99 has been upgraded to
include such standard X-Yachts features as a steel
bottom frame to replace the original glassed in wooden floors. Other improvements include the upgrade of the Bukh engine to a Volvo and aluminium window frames to replace the original recessed Plexiglass panels.

Over the years, one name has stood out in the X-99 racing scene above all others, and after winning his 3rd World Championship in a row we at X-Yachts reluctantly decided that enough was enough, and offered him a job. Dan Lindquist Pedersen is the name, and his principal role in the company is to oversee «end quality control». Dan also brought with him his considerable talents as a racing sailor which are put to good use in new product development as well as allowing us to send a top class sailor to test sail or race on X-Yachts around the World.

It is the success of Dan's X-99 «FAXE KONDI», and his ideas on setting up the X-99 for racing that has formed the basis of the new deck layout and deck gear that is central to the development of the «X-99 Mk 2», so late 1996, ten years after the first launch of the X-99, hull No 500 was delivered to our Dutch importer. She was the first of this new Mk 2 version and can be seen in this brochure.

The deck layout plan in this brochure reveals the principal changes on the X-99 Mk 2, all of which are geared towards making the boat even more crew friendly and efficient to sail, and 100% «race ready» out of the box.

To bring the X-99 more «up to date», the styling of the waterlines has been changed, and the cabin windows have been upgraded to a more «classic» look, with two windows on each side which, on request, can be made to be opening for better ventilation in hot climates.

The interior of the X-99 Mk 2 has also received an upgrade, with new material being used for the freeboard linings, and distinctive new cushion covers.

X-YACHTS has rejected the idea of replacing the X-99, or even of producing a boat designed to

compete in the same market, but instead to develop the X-99 Mk 2:

1. FACT: Even in today's market, the X-99 is still a very fast 33 footer, and up to now, no other designer or producer has been able to build a boat that matches the X-99 in its broad market appeal. Many of the «One Design Classes» being introduced today are pure sports boats, and in our judgement are aimed at such a narrow market that they will never be able to sell in sufficient numbers to allow true international class racing.

2. FACT: More than 500 X-99's have been built to date. Hence the tooling and development costs for this boat have been paid off a long time ago. On price alone, the X-99 Mk 2 will out perform any other 10 m cruiser/racer. We invite you to make your own comparison.

3. FACT: The X-99 is firmly established as a Class, and it is highly improbable that any new yacht, aiming for the same market can ever get close to the X-99. National and International events organized by X-99 associations around the World afford the X-99 owner a well structured, competitive racing forum that is hard (if not impossible) to beat.

4. FACT: Since 1988, the true One Design status of the X-99 has been assured by the formation of the International X-99 Class Association. Together with X-YACHTS (one vote) each country with a Nationally recognized fleet has one vote. The board of the International X-99 Class Association has sufficient power to protect the X-99 owner from unnecessary costs brought about by inappropriate «development» from within the class.

If you are serious about class racing but also want a boat that you can cruise with family and friends the X-99 is still the Class to join.
DESIGNER'S COMMENT:

«Despite its recent appearance in many custom built IMS racing yachts and «look alike» One Design yachts I do not feel that the plumb bow is appropriate for a cruiser/racer as it makes upwind sailing in choppy water a very wet experience.»

«The principal advantage of the low CG bulb keel is seen in cruising yachts that are unlikely to have crew hinging on the rail. We use this style of keel on the newer X-Yachts models for that reason. The X-99 keel is of very low CG, being of composite construction with a lead shoe bolted underneath the cast iron keel.»

«Fractional rigs supported by aft swept spreaders are currently in vogue amongst modern sports boats, but have their roots in the cruising scene. The principal benefit of such a rig is its simplicity, not its performance. The X-99's spreaders are raked aft 5°. This allows sufficient safety margin to tack or gybe the boat without the runners on, but the performance gain from having adjustable runners is still inherent in the rig. A perfectly trimmed fractional rig will always depend on having runners and checkstays - the X-99 is «born» with these tools.»

Niels Jeppesen
